

Black Falls RFQ Q&A

Q: I'm writing in response to the RFP the town has out on the design engineering services for the Blak Falls Culvert. From the RFP it seems maybe there has been a scoping study done to identify this culvert as one which needs to be replaced. Is it possible to get a copy of the study or report? Also, can you give a structure number for this culvert or a location of this culvert? We are excited to submit qualifications to the town and hopefully will be working with you on this project this fall.

Just following up with you on the Black Falls Road Culvert replacement RFQ you have out. We were just wondering if you have a hydraulic report or scoping report for this project. Also, we were curious of the funding source for this project is there a grant or a budget in mind? Also wondering if the town has considered if the road can be closed or if there is a need to maintain traffic? Is the culvert located in the place shown on this map?

A: 90% design plans were done for this project, but a scoping study has not been completed. I have attached the final report that East Engineering did back in 2022. The specific culvert we are looking at is BLKFAL016, the one you have selected in the screenshot. Since the initial designs, this project has moved to using federal funding, and the RFQ we have sent out is primarily to go back and fill in gaps to fulfill federal requirements. Our intention is that traffic concerns will be worked out in this design process.

Q: I am writing to inquire if there is a budget for the construction portion of the subject solicitation.

A: Currently, there is no budget for the construction portion of this project.

Q: We reviewed the recent RFQ posted for Black Falls Road Culvert Replacement and have a quick question. If known, what is the anticipated schedule for bidding and construction of this project?

A: Our anticipated schedule for bidding is early 2028.
